

Current genebank practices for forage legumes

| | ILRI | ICARDA | CIAT | Genetic Resource Centre for Temperate Pasture Legumes, Perth | SARDI, Adelaide | IGER, UK | Millennium seed bank, UK | USDA Fort Collins | EMBRAPA |
|---------------------------------|---|---|-------------------------------|--|---------------------------------|----------------------------|--|------------------------|-----------------------|
| Registration: | Check documentation and free of pests and diseases and give consecutive number. | | | Quarantine checks imported seed for insects. Imported seed documented on file. Collecting number used to name the accession. | | | | | |
| Sample processing | Machine threshing, followed by air screen cleaning. Final cleaning by blowing or hand cleaning. If infested with insects, place seeds in deep freeze for 3 days | Combine for mechanical harvesting and threshing large plots. Final cleaning using air blower, gravity equipment. Small plots handled manually | Physical purity | Clean by hand using rubber mats and aspiration. If insects present seed oven dried at 60degC for 2 hours. | Grown in post entry quarantine. | | Visual inspection, hand cleaning using sieves and aspirator. | | |
| Seed drying | Paper bags in dehumidified drying room 25% RH and 15°C | Paper or cotton bags in dehumidified rooms at 13-15 % RH and 20-25 °C | Mesh boxes at 10% RH and 15°C | Calico bags at 10% RH and 15°C | | self-indicating silica gel | Dried at 15% RH and 18°C | | |
| Storage moisture content | 5% ± 2% moisture content except soyabean not less than 8% | 5-7% with critical moisture content of 3- | 6% moisture content | Seed is dried to equilibrium moisture content (approximately | | 5% moisture content | Seed is dried to equilibrium moisture content (approximately | 6-10% moisture content | 5-6% moisture content |

| | | | | | | | | | |
|--|--|--|--|-----|----------------|---|---------------------------------|---------------------------------------|--|
| | | 4% | | 5%) | | | 5%) | | |
| Germplasm testing | | | | | | | | | |
| Seed moisture content | | | | | | | | | |
| Seed moisture content determination methods | Modified ISTA method | ISTA method | | | | | | | |
| Sample frequency, size, sampling and grinding | Sampled once at end of drying period to determine moisture for storage | Random sampling frequency | | | | | | | |
| Viability testing | | | | | | | | | |
| Viability testing laboratory methods | Follows ISTA method or ILRI standard method. A minimum of four replicates of 50 seeds | Follows ISTA (4 reps of 100 seeds) or sequential method (4 reps of 10 seeds) | | | | Prior to entry into the genebank, seeds are tested to determine germination | 1 rep of 20 seeds on water agar | AOSA guidelines. Two reps of 50 seeds | |
| Monitoring intervals | 10 years above 50% germination 5 years below 50% germination | 5 years initially and longer if high viability | | | 10 to 20 years | | 10 years | 10 years | |
| Health diagnosis | | | | | | | | | |
| Pests and diseases of quarantine importance | Fungi: <i>Colletotrichum sp.</i> , <i>Fusarium oxysporum</i> , <i>Rhizoctonia solanum</i> , <i>Penicillium sp.</i> Virus: Bean common mosaic virus (BCMV), Bean yellow mosaic virus | Fungi: <i>Ascochyta sp.</i> , <i>Phoma sp.</i> , <i>Botrytis cinerea</i> Weeds: <i>Orobanche</i> spp., <i>Cuscuta</i> spp Various virus | Fungi: <i>Cercospora canescens</i> <i>Colletotrichum sp.</i> <i>Macrophomina phaseoli</i> <i>Phaeoisariopsis griseola</i> <i>Phoma sp.</i> <i>Rhizoctonia solani</i> | | | | | | |

| | | | | | | | | | |
|---|---|--|---|--|--|--|--|--|--|
| | (BYMV), alfalfa mosaic virus (AMV), Cowpea mosaic virus (CPMV), Peanut mottle virus (PeMoV), Soybean mosaic virus (SMV) | | <i>Sclerotium rolfsii</i> <i>Drechslera sp.</i> <i>Curvularia sp.</i> <i>Helminthosporium sp.</i> <i>Pyricularia sp.</i> <i>Botrytis sp.</i> <i>Macrophoma sp.</i> <i>Phomopsis sp.</i> Bacteria <i>Pseudomonas syringae pv.</i> <i>Phaseolicola</i> <i>Curtobacterium flaccumfasciens</i> <i>Xanthomonas sp.</i> <i>Pseudomonas fluorescens</i> Virus Potyvirus Group Bean common mosaic virus (BCMV) Bean southern mosaic virus (BSMV) | | | | | | |
| Provide options for testing procedures | Blotter test with 100 seeds for fungi. ELISA and TIBA tests for virus. | Freezing blotter test and PDA for fungi. ELISA for virus and filter wash test for weeds. | Blotter test with 100 seeds for bacteria and fungi. ELISA tests for virus | | | | | | |

| | | | | | | | | | |
|------------------------------------|--|--|------------------------------------|---|--|------------------------------------|------------------------------------|------------------------------------|-----------------------------|
| Storage monitoring | | | | | | | | | |
| Routine monitoring methods | Routine testing for seed viability at regular intervals Stock control system queried to determine accessions for regeneration | 1000 seeds or low germination (Cultivated species 85% Wild species: 75 %) | | | | | | | |
| Monitoring frequency | > 85% germination - Every 10 years < 85% germination - Every 5 years | | | | | | | | |
| Conservation | | | | | | | | | |
| Base collections | | | | | | | | | |
| a) Minimum sample size | 4000 seeds of 90% germination | 1000 seeds of 80% germination for wild species and 90% germination for cultivars. 5g for perennial species. | | 500 seeds with an average 3,000 seeds per accession | | | | 2000-3000 | 4000 seeds of 85% viability |
| b) Seed requirements | 3-7% moisture | 5-7% moisture | 6% moisture content | Equilibrium moisture content (approximately 5%) | | 5% moisture | | 6-10% moisture | 4-6% moisture content |
| c) Packaging | Laminated aluminium foil envelopes | Laminated aluminium foil envelopes with vacuum | Laminated aluminium foil envelopes | Laminated aluminium foil envelopes | | Laminated aluminium foil envelopes | Laminated aluminium foil envelopes | Laminated aluminium foil envelopes | Tin cans |
| Storage specifications | | | | | | | | | |
| a) Assigning location codes | Location codes made from freezer, | Location codes made | | Location fully coded and | | | | | |

| | | | | | | | | | |
|------------------------------------|--|---|------------------------------------|---|-------|------------------------------------|----------------|-------------------------------------|--------------------------|
| | shelf and box number | from unit/block number, row shelf number, shelf number, and tray number | | computerised | | | | | |
| b) Storage conditions | -20°C | -18 to -22°C | -15 to -20°C | -18°C | -18°C | -20°C | -18°C to -20°C | -18°C and -175°C in Liquid nitrogen | -18°C to -20°C |
| Active collections | | | | | | | | | |
| Sample specifications | | | | | | | | | |
| a) Minimum sample size | 500g and above 85% of original germination | 1500 seeds of 80% germination for wild species and 90% germination for cultivars | | 100 seeds. Usually about 30g per accession | | | | | |
| b) Seed requirements | 3-7% seed moisture content | 5-7% seed moisture content | 10% seed moisture content | Equilibrium moisture content (approximately 5%) | | 5% seed moisture content | | | 5-6% moisture content |
| c) Packaging | Laminated aluminium foil envelopes | Permeable plastic containers with screw cap | Laminated aluminium foil envelopes | Laminated aluminium foil envelopes | | Laminated aluminium foil envelopes | | | Aluminiumized paper bags |
| Storage specifications | | | | | | | | | |
| a) Assigning location codes | Location codes made from store, rack, shelf and box number | unit/block number, row shelf number, shelf number, and tray number | | Location fully coded and computerised | | | | | |

| | | | | | | | | | |
|---------------------------------------|--|---|--|---|---------------------------------------|------|---|--|-------|
| b) Storage conditions | 8 °C | 3 °C ± 2 °C | | 3°C | 5°C | 0 °C | | | -5 °C |
| Safety duplication | | | | | | | | | |
| Sample specifications | | | | | | | | | |
| a) Minimum sample size | 1000 seeds of more than 85% viability but 500 seeds for Svalbard | 300 seeds of 80% germination for wild species and 90% germination for cultivars | | 500 seeds | | | 150 seeds | | |
| b) Seed requirements | 3-7% moisture content | 5-7% moisture content | | | | | | | |
| c) Packaging | Laminated aluminium foil | Laminated aluminium foil envelopes with vacuum | | Laminated aluminium foil envelopes | | | Sealed plastic boxes with silica gel | | |
| 4.4.2 – Storage specifications | | | | Long-term duplicate store in Canberra | Long-term duplicate store in Canberra | | | | |
| a) Assigning location codes | Box number | Box number | | | | | | | |
| b) Shipping method | Courier or air freight | Courier or air freight | | | | | | | |
| c) Storage conditions | Black box, long term storage | Black box, long term storage | | Long term storage at -18 °C | | | Long term storage at -20 °C | | |
| d) Legal arrangements | Agreement | | | None – fee for service | | | | | |
| Regeneration | Regenerated in isolation in environment to which they are adapted. | Field planting with isolation cages | | Regenerated in environment to which they are adapted with irrigation. | | | Isolation glasshouses pollinator-proof (legumes) isolation chambers | | |
| Number of plants | | | | 60 plants of Trifolium, 5 to 20 | | | | | |

| | | | | | | | | | |
|-------------------------------|--|--|--|--|--|---|--|--|--|
| | | | | plants of Ornithopus and Biserrula | | | | | |
| Isolation methods | | | | Open pollinated, separation in space by mixing species, cereal buffers between rows | | | | | |
| Harvesting methods | | | | | | Seed samples to be stored in the active collection are formed by taking a balanced bulk. For the long term storage, the seed of each plant is kept in a separate foil pouch and mixed in equal numbers for future regeneration cycles | | | |
| Characterization | Use ILRI descriptors for forages | Mediterranean type of climate. International descriptors | | Growth vigour; flowering time; growth habit; seed yield; stem thickness; leaf size; flower colour; pod characters; seed retention; and leaf markers and pigmentation | | | | | |

| | | | | | | | | | |
|--|--|---|---|--|---|--|--|--|--|
| Distribution of plant materials | | | | | | | | | |
| Policies and regulations | Follow the International Treaty on Plant Genetic Resources for Food and Agriculture for in trust germplasm using the SMTA and Plant Breeders Rights for varieties. | Follow the International Treaty on Plant Genetic Resources for Food and Agriculture for in trust germplasm using the SMTA | Follow the International Treaty on Plant Genetic Resources for Food and Agriculture for in trust germplasm using the SMTA | International Treaty on Plant Genetic Resources for Food and Agriculture for international requests. National policy under review following cessation of national funding and rationalization of Centres | Use SMTA under the International Treaty on Plant Genetic Resources for Food and Agriculture | | | | |
| Process followed | Respond to requests with lists of materials, forms and conditions of access, SMTA. Provide passport and germination data with requests. Small quantities of seed free of charge. | Free of charge | | Respond to requests with lists of materials available. Provide small quantities of seed with passport data and any relevant MTAs . Site habitat data available on request. | | | | | |
| Information | | | | | | | | | |
| Passport data | | | | Passport descriptors: country; province; collector; collection date; location; latitude; | | | | | |

| | | | | | | | | | |
|--|--|--|--|--|--|--|--|--|--|
| | | | | longitude; altitude; aspect; slope; rainfall; drainage; parent rock; soil depth; soil texture; soil pH; surface hardness; surface stoniness; species abundance; species spatial distribution; habitat; associated species; and grazing pressure | | | | | |
|--|--|--|--|--|--|--|--|--|--|
